

# Covid-19 False News Detector User Manual

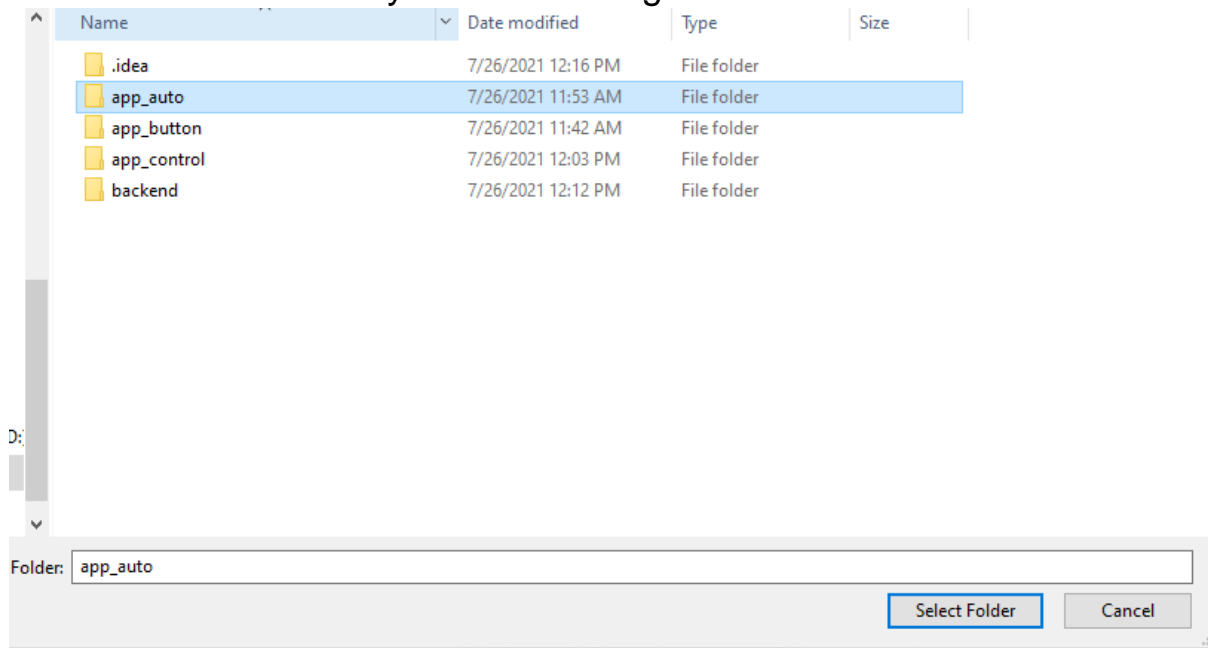

1. Copy and paste **chrome://extensions** into your chrome browser
2. At the top right hand corner, enable developer mode.

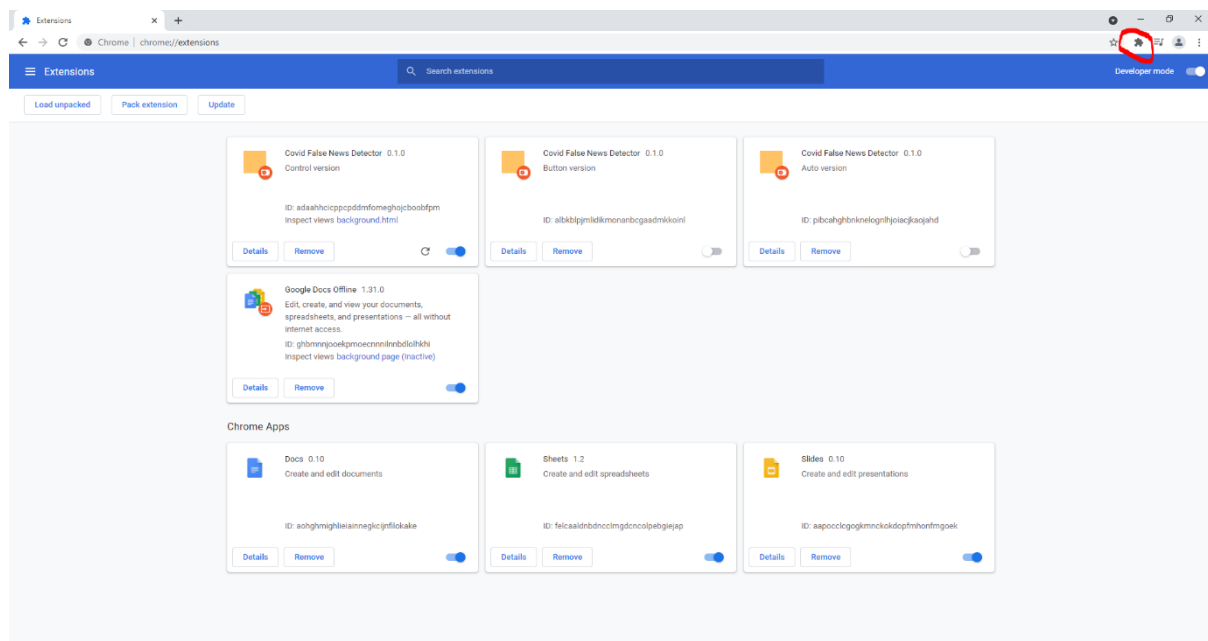

3. After enabling developer mode, go to the top left hand corner and click **Load unpacked**.

4. Select the folder you have been given.

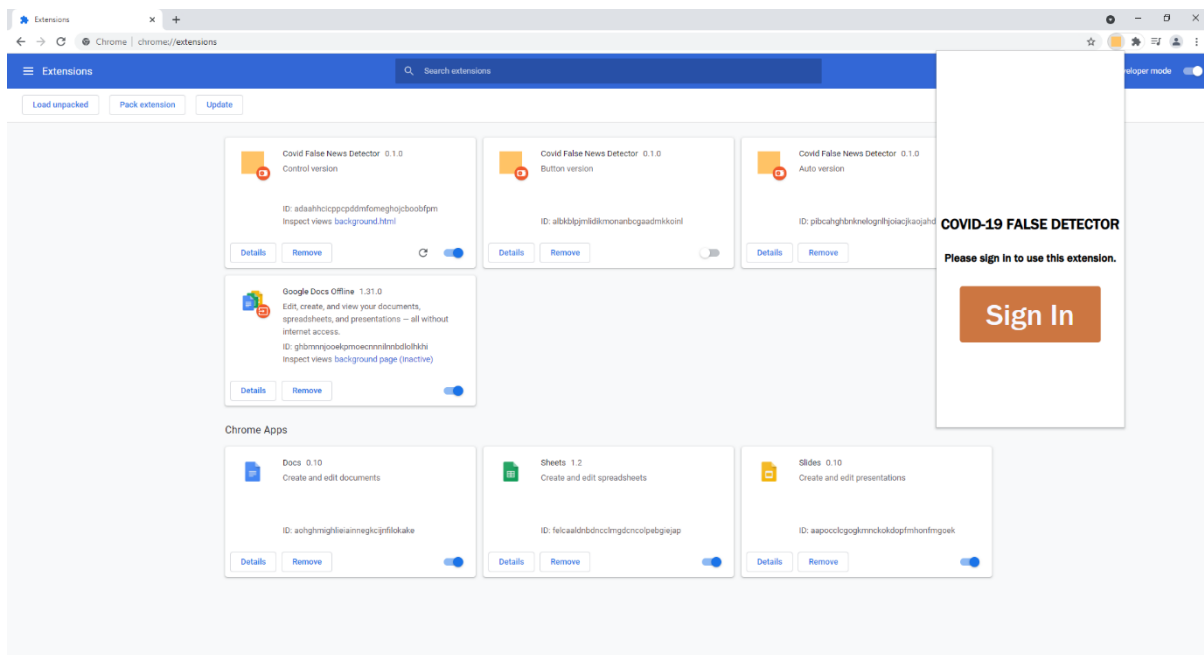

5. Next, click on the plugin icon at the top right hand corner of the

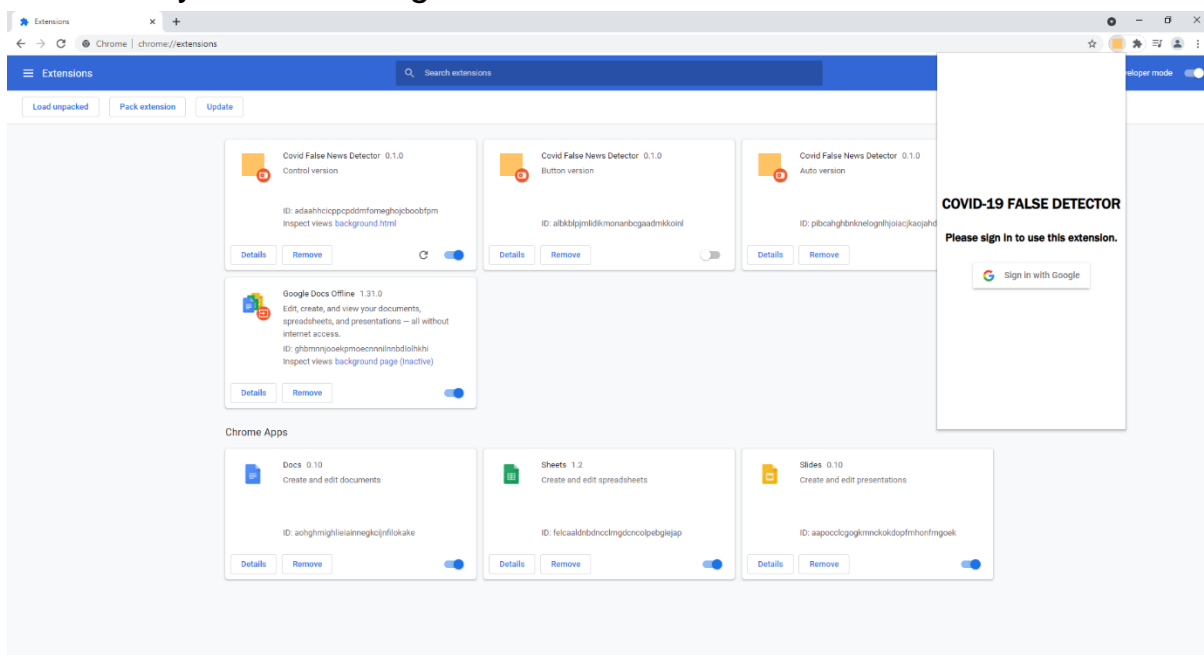

browser as labeled below.

You should be able to see **Covid False News Detector** under the lists of extensions enabled for your browser

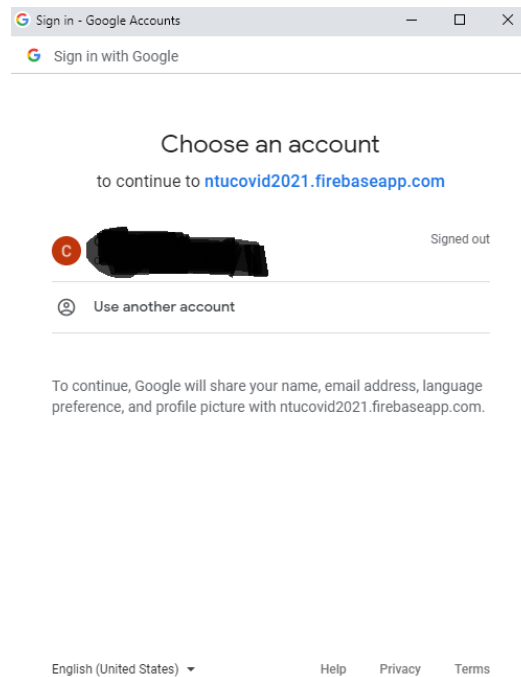

6. Click on **Covid False News Detector** under the lists of extensions and you should see the following image.

7. Click on **Sign In** and sign in with your google email. Please note that you need to sign in to use this extension.

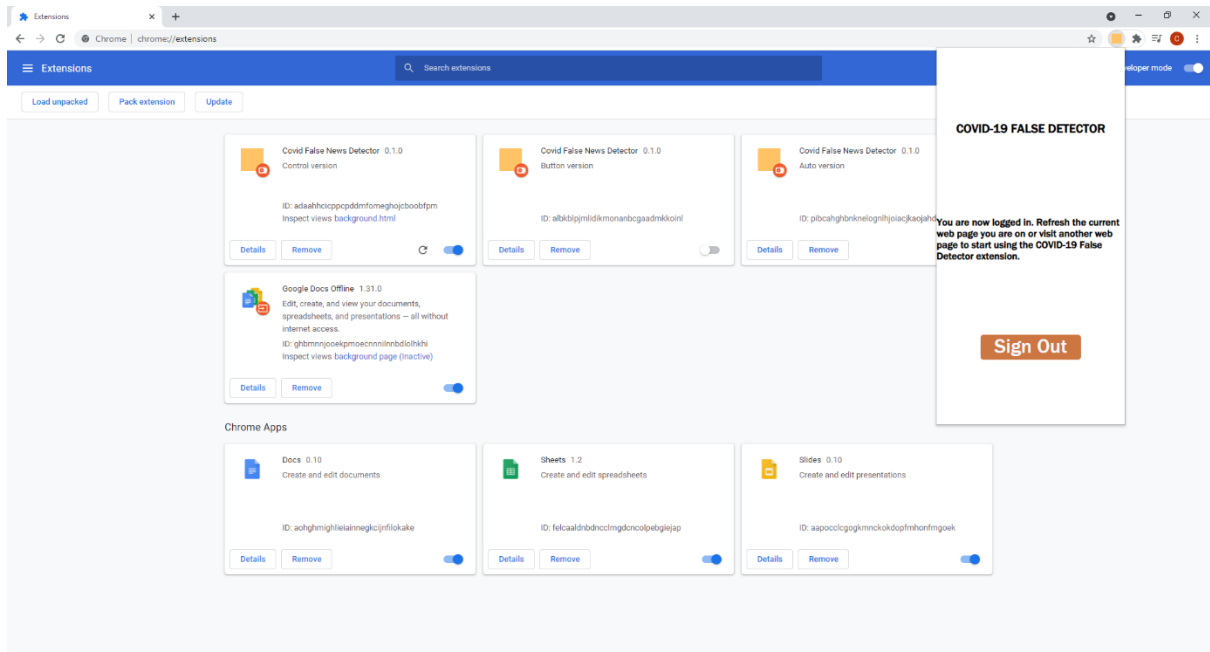

8. A pop-up should appear after click on **Sign in with Google**.

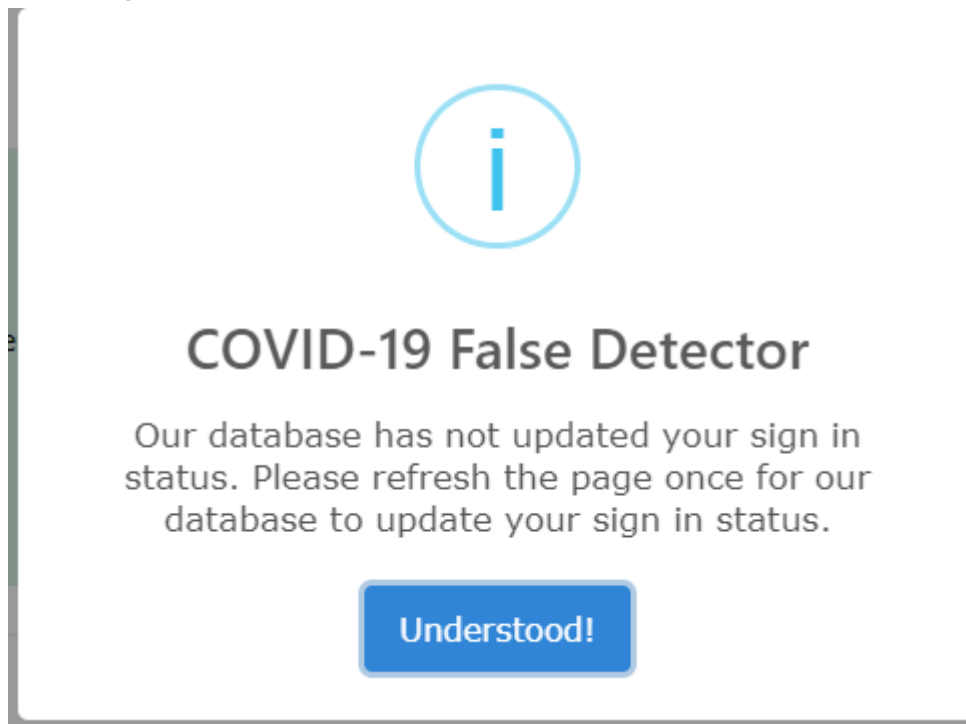

Sign in using the google email account you wished to be identified with. Please use the same google account throughout the period of testing.

9. After logging in, the extension UI should change to the following. You can click on the sign out button when you wish to stop using the plugin.

10. You can now head over to any website to test the plugin. Please note that for the first website you visit you will see the following message.

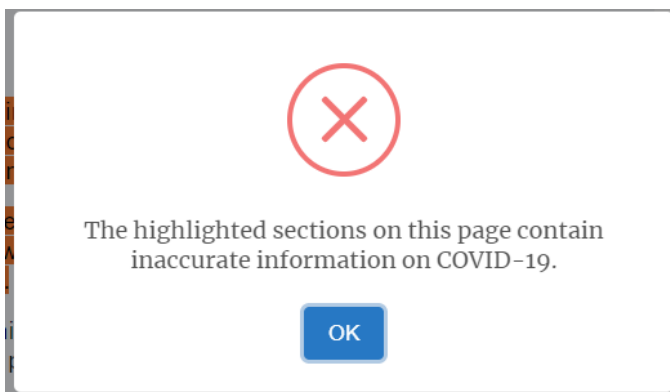

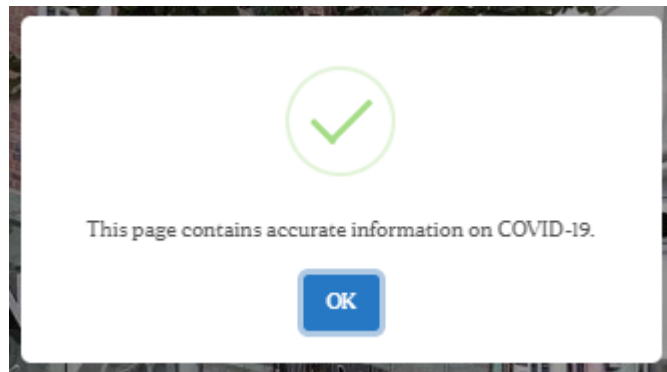

This is because our backend server takes 1 page refresh to update your sign-in status. Kindly refresh the page once and the extension should work normally.

For users using **app\_auto** (Auto Version):

You will not receive any prompts if your website does not have any Covid-19 related information.

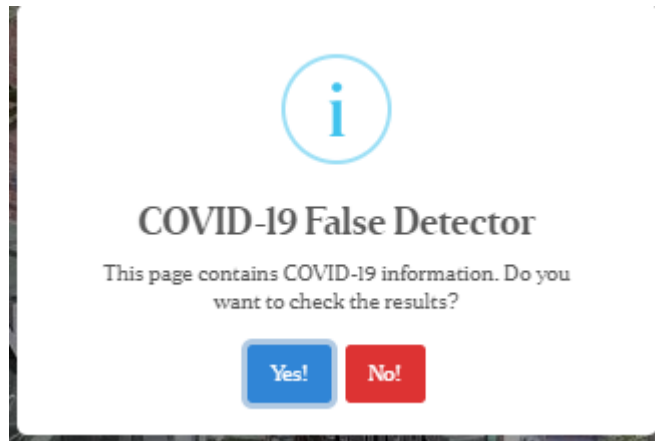

If your website is displaying Covid-19 related information, you should see either one of the following messages depending on the validity of the information.

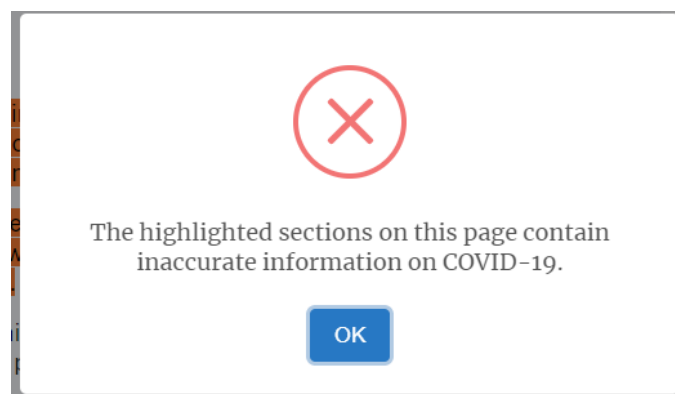

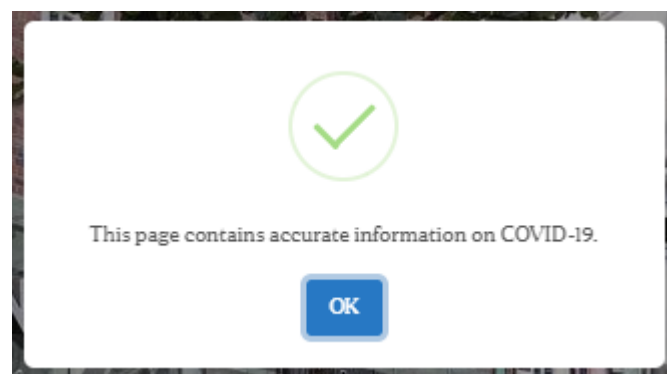

For users using app\_button (Button version):

You will not receive any prompts if your website does not have any Covid-19 related information.

If your website is displaying Covid-19 related information, you should see the following message.

If you click no, you will not see the results. If you click yes, you will see either one of the following messages depending on the validity of the information.

For users using app\_control (Control Version):

You will not receive any messages. This version of the extension acts as a control to the other two.
